Implementation 1:

```java
import java.sql.Wrapper;
class WrapperClass {
    Integer i ;
    Character c ;
    Boolean b;
        WrapperClass(int val){
        i=val;
        System.out.println(i);
}
    WrapperClass(char val){
        c = val;
        System.out.println(c);

    }
    WrapperClass(boolean val){
        b=val;
        System.out.println(b);
    }
 void getWra(int a){
        Integer i = a;
        System.out.println(i);
    }
 public static void main(String[] args) {
        //autoboxing
        WrapperClass wrap = new WrapperClass('a');
//unboxing
Integer i = new Integer(8);
System.out.println(i);
    }
 }
```
